

LOCKABLE ANTI-WAVE POUCH

Put away your phone. Free up your concentration.

This solution complies with the government directive 'MOBILE PHONES DURING BREAKS' in schools.

Our innovative cover effectively blocks all waves, rendering the smartphone unusable as soon as it is inserted. Students keep their phones with them, but cannot use them during lessons. This practical device promotes responsibility and helps reduce distractions in the classroom.

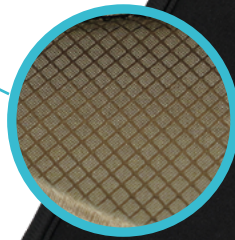

LOCKABLE ANTI-WAVE POUCH FOR SMARTPHONES UP TO 7"

Ref. 001395

SILVER THREAD INNER LINING/ FARADAY CAGE
Blocking of all electromagnetic waves

SECURE MAGNETIC LOCKING SYSTEM

STRONG AND DURABLE NEOPRENE MATERIAL

TRANSPARENT LABEL HOLDER
for identification/personalisation of the pouch

Interior lined with conductive silver thread fabric, blocking electromagnetic fields (mobile phones, Wi-Fi, Bluetooth).

Special magnetic screw-on closure system, inspired by anti-theft devices. Impossible to open without the unlocking magnet.

Resistant and durable tear-proof neoprene material to protect your phone from drops and shocks. Includes a customisable card holder.

How does the MOBILIS[®] anti-wave pouch work?

1 Put the phone in the pouch
The pupil places their phone in the pouch under the supervision of a supervisor or teacher. illustration

2 Locking the pouch
He presses the hexagonal button to lock the pouch.

3 Unlocking the pouch
At the end of the exam or the day, the student goes to the magnetic base. They place the circle on the magnetic base, then press the hexagonal button again to unlock the pocket.

Magnetic base fixing system

1 Unscrew the base of the magnet.

2 Secure with screws (not supplied), then close the base.

3 Optional: reinforce the fastening by using three additional screws on the outside.

Although we present an example in an educational setting, these pouches can be used in many other contexts: professional events, offices, courtrooms, public transport, sensitive locations, travel, as well as cultural or sporting activities.
