CARE & CARRY

OUR COMMITMENTS : DESIGNING ECO-DESIGNED PRODUCTS IN FRANCE

At MOBILIS®, we have chosen to optimize our environmental and social impact throughout the life cycle of our products. We design our products with sustainability, recyclability and reparability in mind, in terms of choice of materials, place of manufacture, transport, packaging and end-of-life management.

2 factories in France

We're the only player on the market to have our own factories in France. The Made in France rooster symbol indicates that the product has been entirely manufactured in France.

This international label guarantees the origin and processing of the eco-responsible recycled materials used throughout the production chain.

This logo indicates the exact proportion of recycled materials in relation to the total weight of all the materials making up the product.

MOBILIS® was awarded the Silver ECOVADIS medal for its commitment to each of the 4 areas: Environment, Ethics, Social and Human Rights, and Responsible Purchasing.

In 2023, MOBILIS® is a member of the international collective working for a healthier planet. This logo indicates that the purchase of this product contributes to the support of environmental projects within the framework of 1% for the Planet.

Since 2019, MOBILIS® has been a signatory to the United Nations' Sustainable Development Goals and is committed to taking positive action for mankind and its environment.

OUR PRODUCTS ARE TESTED TO BE APPROVED

We don't just manufacture accessories, we design solutions to extend the life of professional IT equipment! Making it «sustainable» over time is at the heart of our concerns and commitments.

For each product we develop, technical tests are carried out in our prototyping laboratory.

This symbolizes the drop-resistance of our protective cases. Rigorously tested with specific mobile devices, they are subjected to drops from a specified height. The figures shown represent the height and number of drops the case can withstand before showing signs of damage.

The MIL-STD symbol indicates that our protective cases exceed military standard 810G, developed by the US Army testing laboratory. This standard guarantees exceptional durability, with an estimated working life of between 3 and 8 years. The figure specified represents the multiple of resistance compared with the standard's requirements, ensuring extreme protection against environmental stress and impact.

The IK protection index qualifies resistance to mechanical impact. The associated number varies from 0 to 10 and indicates the degree of protection against impacts of a certain energy without suffering significant damage. The higher the number, the greater the impact resistance.

NEED A SPECIFIC DEVELOPEMENT?

Different businesses have different needs. That's why we create unique, tailor-made solutions based on your specifications.

We adapt and customize our products to your needs and requirements: portability systems, dimensions, colors, logos...etc

Tell us what you need, and we'll work with you to design the product that's right for you!

BACKPACKS

BESTSELLER

THE ONE backpack
1 compartment - 14-15.6"

PRIVACY FILTERS

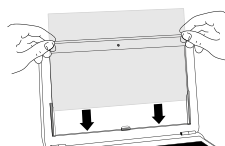

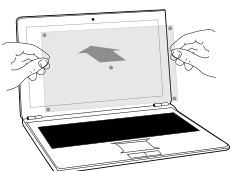

From prying eyes

MOBILIS' privacy filters use a microshutter technology which allows only the person in front of the screen to view the displayed data. On each side of the screen people only see black screen. This essential protection allows you to work in total security, whether in public spaces, trains, planes... or even at the office !
